

# Rijn & IJssel Water Board

Treats waste water and produces coolant and biogas.

The Rijn & IJssel Water Board provides water management in the Achterhoek region, Liemers region and part of the province of Overijssel. This involves management of (ground)water levels, waste-water treatment, and supply of clean water in streams, drainage ditches and rivers.

The Water Board collects the waste water from nearly 600,000 residents and 20,000 companies in the sewers and purifies it in waste-water treatment plants. At InnoFase, we receive the waste water from multiple companies. After treatment, we re-supply a portion of it as coolant. The rest of the water flows back into the IJssel River.

The Rijn & IJssel Water Board has around 140 sewage plants that pump waste water via pressure mains to 13 waste-water treatment plants. Here we treat the sewage in close collaboration with the local municipalities.

Waterschap  Rijn en IJssel

## COMPANY INFORMATION

Status:	Well established
Acreage:	14HA
Employees:	6

## CIRCULAR ROLE AT INNOFASE

- The Rijn & IJssel Water Board supplies residual waste to AVR
- The Rijn & IJssel Water Board supplies sludge to AVR
- The Rijn & IJssel Water Board supplies treated coolant to AVR and 4PET
- The Rijn & IJssel Water Board supplies biogas to 4PET

## CIRCULAR ROLE OUTSIDE INNOFASE:

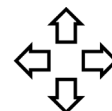

- The Rijn & IJssel Water Board treats the waste water from thousands of households and companies and manages the groundwater and surface water in the region.
