

Prezero

Processes residual waste from households and businesses, produces renewable heat, electricity and circular raw materials.

Prezero Nederland collects waste from 530,000 households and 80,000 companies and organisations. We use this waste to make raw materials for new products. But we also help organisations with sustainable waste management to ensure as much waste as possible is recycled.

We believe that waste is valuable, as it can be used again and again as raw materials for new products. This means fewer new raw materials are required, so we can save them for future use. We call this the 'raw materials revolution'.

Together with our partners, the recycled products produced include park benches from ketchup bottles, toilet paper from milk cartons and watering cans from washing liquid containers.

COMPANY INFORMATION

Status: well established:

Oppervlakte:

CIRCULAR ROLE

- Prezero supplies biomass to Olde Bolhaar
- Prezero supplies waste water to the Rijn & IJssel Water Board

CIRCULAR ROLE OUTSIDE INNOFASE:
